Note: The average statewide millage rate is estimated using the \$50,000 homestead exemption as a sample of the total statewide property tax universe and calculated as the ratio of the total estimated homestead exempt property taxes divided by the total reported homestead exempt property values.

*Data change: Beginning with tax year 2012, millage rate is estimated by using school district operating millage and assessed property values reported to DOR for homestead exempt properties. Between 2008 and 2011, these values were estimated based upon county-level reporting.
